

## Tastecapade App Feedback

Kindly closely follow the feedback. We hope to finish and upload this app by today 25<sup>th</sup> January 2017.

- logging in with Facebook not working it's taking time and still on the loading sign.
- when I click add attendee it gets stuck (on check out page).
- When I add first attendee as an adult, then add the second as a kid, and then add another regular attendee (adult), the app crashes.

this is the upcoming reservations section of the user. no bar code anywhere! also it shows 2 groups (second group is a different person who booked the Sri Lankan tour, the list is showing on my upcoming reservations when you click view details.)

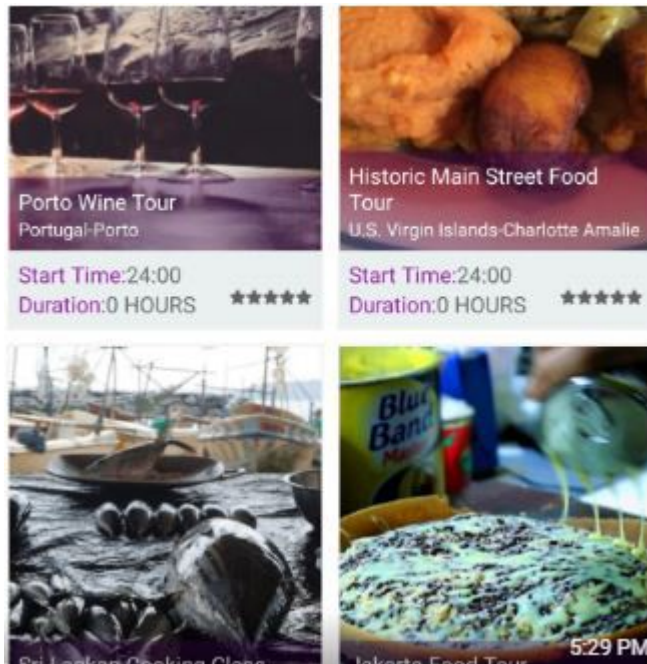

Can't add pictures and comments yet, though the button show up.

On successful checkout, No client name, start time, date of reservation and number of bookings are showing. Please refer to website how we show it. This used to show before on app, but it was lost in recent updates. Client needs to know what did he book and what date and time as well as number of seats.

The Stars and number of hours still not reflect and start time as well. Also in some tour reviews the stars are at zero, it's grabbing actual ratings I think?

- Deleting photos option is not there.
- Can you make the font of the titles smaller? the bars are so big it's unnecessary. with the font smaller and bars shorter it will make a difference.
- On checkout page, while adding attendees, phone number of first person should always be saved and should always appear as default number after that for future attendees.

can we make the fonts a bit smaller and boxes too a bit smaller?

View Attende Details

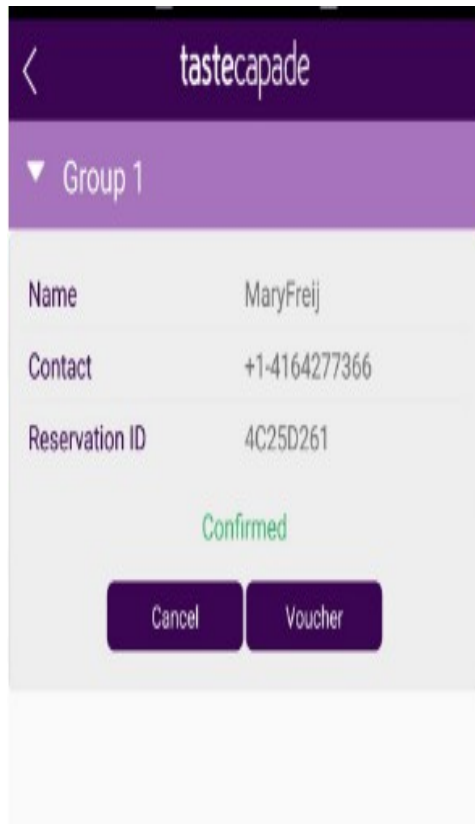

'View Attendee details" is confusing. can this be the voucher button instead and we put the list of the groups and names right below in one page? This was already discussed in our previous meeting that attendee details shouldn't be deeper than3 levels.

The same for this page, where duration doesn't reflect.

The start rating is supposed to be five stars, but it doesn't reflect correctly. The tours who do not have any rating stars, should also be 5 star rated by default.

this is what I am referring to to be in the main tour confirmation page

funny enough it is. showing all bookings. this should be eliminated and users should only see their bookings and not other guests! (although this gives me an idea for the future) can we have a section

that says meet other guests on the tour and it just shows the user name and they can click and view their profile! (in future).

But for now, please don't show other guest's bookings under a user's profile.

same. with the confirmed tour, voucher has no details below
